

## CLASS IS IN SESSION

Our customers are very important to us and are the #1 reason why we are becoming the household name in rodent control throughout the world.

We want to help ensure that you are completely satisfied with the results of the revolutionary Rat Zapper

This product, properly used, will become your method of choice in rodent control for years to come. The following information will greatly increase your success.

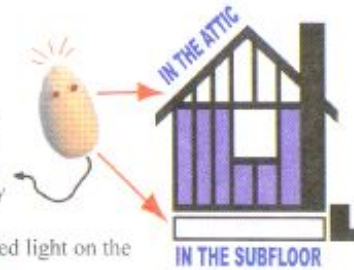

**THANK YOU FOR PURCHASING THE RAT ZAPPER**

**The Power Tool for Rodent Control™**

### OPTIONS

If you are using the Rat Zapper in fairly inaccessible places such as your attic or sub floor area, and you don't want to crawl into those creepy places each day, or it's hard to see the blinking red light on the unit...**GET A RAT TALE!**

The RAT TALE is a monitor cord that plugs into the Rat Zapper. It is a 12 foot long extension with a red LED light at one end. It is powered by (2) small lithium batteries (included). Place the RAT TALE in a spot where you can easily see the red light. Once you notice the red light flashing, retrieve your Rat Zapper and properly dispose of the dead rodent.

If you want your Rat Zapper to "ZAP" longer and harder... **GET A RAT PACK!** The 4 alkaline "D" cell battery pack (batteries not included) has the capacity to ZAP approximately 40 rodents with one set of batteries. It's easy to install and you can be up and "zapping" again in minutes.

You can switch between "AA" and "D" cell batteries any time you want!

THE RAT PACK & THE RATZAPPER

### ARE YOU ARMED WITH A BATTLE STATION?

We also sell a "Battle Station" system. This mega power tool kit for rodent control commonly consists of (5) five Rat Zapper units, each with a transmitter which sends a wireless signal to a Monitoring Panel when the trap is fired. We will soon be able to send a message to your cellular phone or pager when one of the Zappers has done its job!

THE RAT ZAPPER BATTLE STATION!

### OKAY CLASS IS ALMOST OVER!

THE RATZAPPER

The 4 alkaline "AA" batteries (not included), which power your Rat Zapper, should last you about (30) thirty days, or deliver enough current to ZAP up to 10 rodents. (The battery compartment is located under the cover between the switch and the open end of the zapper). If the red check light does not blink or is dim when you turn on the power switch, then it's time to replace the batteries.

Remember that the Rat Zapper and Rat Tale are constructed of space age plastics, and contain cool electronics to deliver years of dependable service. Our products are designed to work as a "rodent sentry" 24 hours a day-7 days a week if needed, otherwise, just pull it off the shelf as necessary.

### NOT ENOUGH INFO?

Need a little more info? We welcome your visit to our robust web site at [www.ratzapper.com](http://www.ratzapper.com) to see and learn more about us and our quality line of products, answers to FAQ's, and amazing testimonials from our great customers!

**(888) - DEAD RAT (888) - 332 - 3728**  
(International callers 1-805-654-1117)

Rat Zapper is a Trademark of AgriZap, Inc.  
Patented Solid State Circuitry  
Made in China

Patent No. 5,269,091 and 5,949,636  
E.P.A. Est. 73527-CHN-001

## FIRST, DO A LITTLE DETECTIVE WORK!

The Rat Zapper needs to be placed in an area where rodents are active. Rodents do not normally perform things in the middle of a room, during daylight hours!

Look for droppings in suspected areas of rodent activity. Look for any points-of-entry. Always place the Rat Zapper next to a wall or other similar barrier where you suspect the rodents are traversing.

Look for Droppings along Baseboards

Look for Droppings in Attics & Subfloors

Look for a "Point-of-Entry"

## BAITING STRATEGIES

Once you are confident that you are on target, then you need to properly bait the Rat Zapper. Dry pet food has been carefully researched, and we have found it to be a very effective lure for rodents. You may use any dry bait that works ... it won't hurt our feelings! Dry dog or cat food should work very well. Please don't "glop" any moist bait in your brand new Rat Zapper because it may cause a "false tripping" and you won't get Mr. Mouse or Mr. Rat as quickly as you wish. Goopy oil-based "yummy rodent tummy pleasers" like Peanut Butter should be placed in a plastic container (e.g. bottle cap) at the back of the trap.

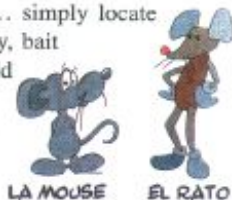

The Rat Zapper

Take whatever bait you wish to use and place a few pieces at the closed end of the trap where the vertical metal plate is located. When you turn ON the switch, the red LED light on top will blink ONCE indicating that the power is on. Now place the Rat Zapper in your target area, turn ON the power, and go watch T.V.

## MICE ARE EASY - RATS ARE TOUGHER

If you have a mouse problem ... simply locate your Rat Zapper in the area of activity, bait the chamber and turn it on. You should have results that night if there are mice present. Rats typically are much more wary (neo-phobia is the big word we use around here).

## PRE-BAIT THE RATZAPPER FOR RATS

Place about 4 pieces of bait inside and slide them to the closed end of the chamber; place a few pieces about one inch inside the open end. **DO NOT TURN ON THE POWER.** Go ahead and make their day with a free meal. Once the bait has been taken ... replace the bait **ONLY** in the back of the chamber, and **NOW TURN THE POWER ON!**

Anything new that is placed in the environment, no matter how desirable, will likely be avoided for a period of time. It should only take one or two nights but there have been occasions when it has taken up to 10 days before the first rat has ventured into the chamber. The best thing you can do is leave the Rat Zapper alone and don't touch it. The amount of time may vary based on the amount of food available to Mr. Rat. Try to remove any other food sources, and your unwanted tenants will scurry to the new food bin inside the Rat Zapper for a shocking dining experience! Once you get the first rat, the others will play "follow the leader". The rest of the colony will soon be sniffing their way down a path of no return.

## INSPECTION AND REMOVAL OF DEAD RODENTS

To determine "success" you need only to look at the top of the Rat Zapper to see if the red LED light is flashing! This red light, apart from being a visual battery check, is also a kill indicator light. You may also look inside the trap to detect your catch...don't worry, it will not be messy or bloody like other traps. The Rat Zapper has been designed to provide you with a humane and environment friendly means of pest E-Rat-ication.

Turn the switch to the OFF position. Pick up the Rat Zapper and simply dispose of the rodent in a suitable receptacle. **YOU NEVER HAVE TO TOUCH A DEAD RODENT AGAIN!**

## CLEANING YOUR RAT ZAPPER

If the trap buzzes or sounds like it's zapping when you turn it on, and the red light does not stop blinking ... don't worry, it just needs a little cleaning. Some material is "bridging" the metal plates, which sets off the trap. First, make sure the switch is turned "OFF" and the batteries have been removed. Add dish detergent to approximately 1 inch of hot water placed in a disposable tray that will accommodate the Rat Zapper. Immerse the lower portion of the Rat Zapper in the pan for one hour. Use a small brush to gently clean the area around the "kill" plate. Then gently flush out the bottom of the Rat Zapper with warm water, taking care not to get water into the upper compartments. Set the Rat Zapper on end (open end DOWN) to dry completely, then place the batteries back in the unit. Simply rebait the trap, place it back into the target area, turn the power "ON" and keep Zapping!

## WHAT BATTERIES DO YOU USE?

"AA" - Duracell Ultras with M3 technology OR Energizer E2 Titaniums are strongly recommended for longer life - up to 10 kills or 30 days standby power. Energizer "Lithiums" are the best, but are somewhat expensive. **DO NOT USE RECHARGEABLE BATTERIES.** Standard alkaline "D" cells can be used in the Rat Pack.

## TIPS FOR OUTDOOR USE

- To protect the Rat Zapper from moisture, pull a 1-gallon storage baggie over the back end of the unit, and pull it forward so it covers the battery compartment. Use a rubber band to secure the bag in place.
- To ensure that larger animals do not move the Rat Zapper, place a weighted object on top of it, or anchor the trap to the ground.

## TROUBLESHOOTING

Please visit our website at [www.ratzapper.com/techsupport.cfm](http://www.ratzapper.com/techsupport.cfm) or call our toll free Technical Support Line for any problems you may have with your Rat Zapper.
